

Cube Detention & Retention Tanks

PLASPOKE
Bespoke Plastic Fabrications & Designs

Modular underground tanks that are made to fit into every situation.

Plaspoke's modular designed retention and detention tanks offer unmatched strength for a fraction of the cost of similar product providers on the market. Being custom fabricated to your specifications, there is no need to worry about not having your size tank in stock.

Our internal polypropylene honeycomb type design can support deeper buried depths and heavily trafficked areas, while the external skin creates a truly modular design that can save valuable time and money on installation.

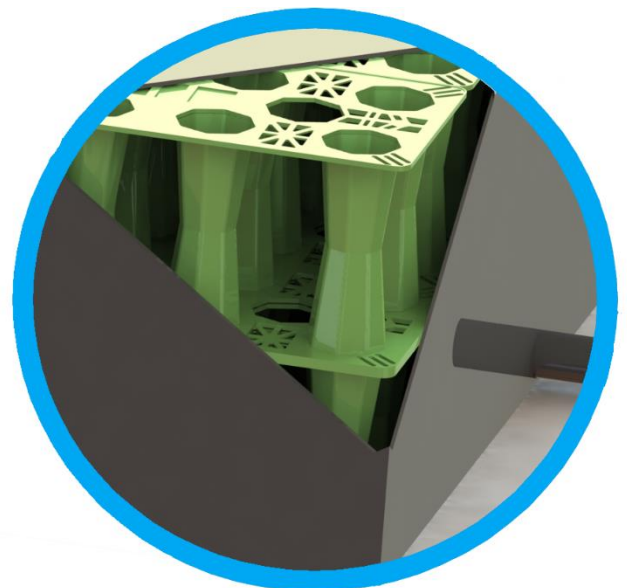

What sets us apart:

- Generally fabricated in 2 weeks or less!
- Significantly cheaper than other custom fabricators on the market
- Comes fully assembled with inlet, outlet and overflow spigots
- Quick, free, no-obligation quotes
- Every weld is electrically tested for 'peace of mind' quality
- Production certificate with every tank.

What sets our tanks apart is the specially designed polypropylene modules that give these tanks the strength that few can match. This means our tanks can be buried at depths of up to 2 meters, and can support over 35 ton per square meter.

There cube design means you use space more efficiently compared to round tanks, and there's no backfilling necessary onsite.

These tanks are considered a drop-in-place solution that come packed with all the necessary features to make the install as convenient as possible. These include lifting lugs, service/testing and warranty documentation, producer statements (PS1 if requested), and all connections fully welded at any position and size required.
